

Notice to all BB interested parties:

14 August 2017

Notice of Revocation of Exemption of BB Production Facility – Dawson Valley.

Dawson Valley BB Production Facility, operated by Westside Corporation Pty Ltd, was subject to an exemption with an effective date 1 July 2014, this exemption being on the basis that the nameplate rating of the facility was less than 20TJ per day. AEMO has revoked this exemption, with the exemption cancellation date taking effect from the 2 October 2017.

The revocation of the exemption declaration, for the production facility, is made in accordance with clause 152(1) on the basis that AEMO has reasonable grounds to believe that the:

- Natural gas from the production facility will flow into a BB pipeline. The production facility is connected to the BB pipeline, Queensland Gas Pipeline; and
- Nameplate rating is greater than 20TJ per day. It is AEMO's understanding the nameplate rating is 30TJ per day.

A consequence of this is that Westside Corporation will need to provide information for Dawson Valley BB Production Facility in accordance with Part 18 of the National Gas Rules.

The exemption cancellation date, for the production facility, is effective from 2 October 2017.
